

While Loops

Loops are used to execute commands some number of times.

Format:

```
while CONDITION {  
    ZERO OR MORE COMMANDS  
}
```

Code:

```
i = 0  
while i < 3 {  
    printf("%d\n", i) // %d is placeholder. \n is newline.  
    i + 1 // Increments i. No need to do "i = i + 1".  
}
```

Output:

```
0  
1  
2
```
